Ecotap type Homebox Flex PUSH BUTTON

This car charging station was developed for ease of use and features a flexible coil cord, expandable up to 4 metres. The plug can be connected to your electric vehicle directly. Made of 2 mm steel and designed for wall.

The start/stop procedure works by means of a Push Button. This charging station communicates with the car. After all safety regulations have been checked, the maximum permissible charge current is applied. The charging process is started automatically.
